years

of Glassmaking Excellence

History

129
YEARS

of Glassmaking
Excellence

1890

VICRILA began in 1890 as carafes manufacturer

1895

VICRILA production was based on flat glass

1901

The company merges with "La Jerezana" bottle factory

1925

The "Cía General de Vidrieras Españolas, S.A." company is created

1954

New furnace with more than 120 Tm per day

1963

The Fuel oil is used as fuel in the company

1971

The company started the manufacturing of glassware

1980

The company was bought by ARC

2009

ARC sold the company to the Spanish Board of Directors

2018

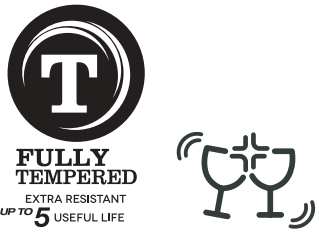

Vicrila Industrias del Vidrio, S.L. is incorporated with 100% local share capital

2019

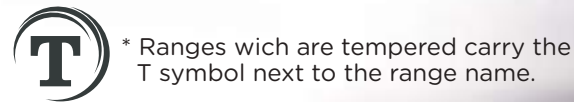

Looking into the future

Manufacturing excellence

RIM TO FOOT TEMPERED "T"

Fully tempered glasses are resistant to mechanical shocks, extending the life of the product up to five times, compared with annealed glass ranges.

LINED & CE MEASURE (LCE)

VICRILA hold an official UK government NWL (National Weights and Measures Laboratory) Certificate.

SAFETY

Should a glass break due to an excessive blow, a tempered glass will break into small pieces than an annealed glass.

FOOD SERVICE COLLECTION

THERMAL RESISTANCE

Thermal shock tested and resistant to 135°C and can withstand changes in temperature from hot to cold.

DISHWASHER & MICROWAVE SAFE

Strong and durable, shock tested and capable of industrial dishwasher cycles, while maintaining clarity.

STEAMLESS FLAME POLISHED STEM

No seam between the bowl and stem, ensuring a more enjoyable drinking experience and an aesthetically pleasing glass.

WHAT IS TEMPERED GLASSWARE?

Tempering is a thermal process of heating a glass close to melting point then cooling it rapidly. This causes the outer surface of the glass to cool and shrink faster than the inside of the glass wall creating a tight skin.

This closes the many hairline fractures that naturally occur in regular annealed glass and make a vastly stronger product.

HOW STRONGER IS TEMPERED GLASS?

Tempered glass is 5 times stronger. This is known as Mechanical Shock Resistance, making a cost effective choice.

ARE VICRILA GLASSES FULLY TEMPERED?

All glassware with the **T** are fully tempered from rim to foot both inside and out. Not all manufacturers temper to the same high standards.

IS TEMPERED GLASSWARE MORE RESISTANT TO TEMPERATURE CHANGES?

Fully Tempered items are resistant to 135°C temperature changes. This is tested by taking an item of glass from an oven at 135°C and then plunging it into cold water. The glassware will not shatter or break.

IS TEMPERED GLASS SAFER?

Should a glass break due to an excessive blow it will break into small pieces than an annealed glass, making it safer to use within the hospitality industry.

DO I HAVE TO USE TEMPERED GLASS?

By different region the local licencing authority will be able to advise you of this.

HOW CAN I TELL IF MY GLASSWARE IS TEMPERED?

Vicrila have placed their **T** on each item which is tempered.

Scale 1:1 | Centimeters

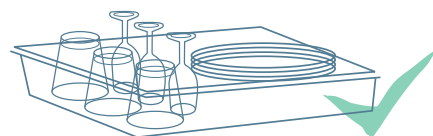

Scale 1:1 | Inches

Do not stack tumblers and glasses that they do not have the capacity to stackability.

Do not use glassware for storage of flatware

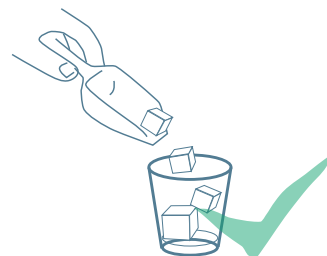

Separate glassware, flatware and plates in bus trays.

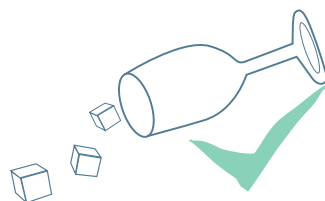

Never pick up glasses in bouquets.

Never pour cold liquid into a hot glass, such as one just out of the dishwasher, or hot liquid into cold glass.

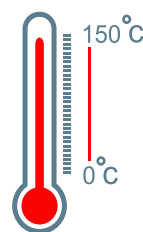

Never scoop ice with a glass. Use a plastic scoop.

Empty ice from glass before sorting bus tray, this allows more time for the glass to reach room temperature before washing.

Utilize the correct rack system for tumblers and stems. A divided rack is always recommended.

Thermal shock: The result of a rapid temperature change in the glassware which can crack the stem.
Only in non-tempered stem.
